

VinoBuzz Senior Mobile Developer Assessment – React Native

Overview

Role: Senior Mobile Developer (React Native)

Time: 4–6 hours

Context: Reference vinobuzz.ai (desktop) for domain context. You will build a small React Native app.

Objective

Build a minimal React Native prototype that demonstrates two core mobile experiences:

1. **Chatbox** – persistent, overlay-style chat with mock messages
2. **Product Detail** – wine/product page with gallery and key actions

Focus on **mobile-specific patterns**, not pixel-perfect UI. Mock all data.

Task 1: Chatbox (FAB + Overlay)

Requirements

- **Entry:** Floating action button (FAB) that opens chat
 - **States:** Minimized (small bubble) ⇌ Expanded (full-screen or bottom sheet)
 - **Content:** Mock 3–5 messages, typing indicator, quick-reply chips
 - **Integration:** One message must include a “View product” action that navigates to Task 2
-

Task 2: Product Detail Screen

Requirements

- **Gallery:** Horizontally swipeable images (use `FlatList` or `ScrollView` with paging)

- **Content stack:** Name, price, CTA (“Add to Cart”), and one expandable section (e.g., tasting notes)
 - **Sticky CTA:** “Add to Cart” visible while scrolling (sticky footer or bottom bar)
 - **Loading:** Show a skeleton or placeholder while “loading”
-

Task 3: Navigation & Connectivity

Requirements

- **Navigation:** Use React Navigation. Flow: Home → Product Detail ← Chat (“View product”)
 - **Deep link:** Support opening a product by ID via deep link (e.g., `vinobuzz://product/123`)
 - **Offline:** Show a simple “No connection” banner when offline (mock with a toggle or `NetInfo`)
-

Deliverables

1. **Repo** – React Native (Expo or bare) project in a public GitHub repo
 2. **README** – Run instructions, assumptions, and 2–3 implementation notes (e.g., why you chose a particular gesture lib, how you handled keyboard)
 3. **Optional:** Short screen recording (≤2 min) walking through the flow
-

Tech Stack (Suggested)

- React Native (Expo recommended for speed)
 - React Navigation
 - Mock data (no real API required)
 - Use TypeScript
-

Evaluation Criteria

Area	Focus
Mobile patterns	Correct use of <code>FlatList</code> , <code>KeyboardAvoidingView</code> , safe areas
Gestures & layout	Swipeable gallery, expandable section, sticky CTA
Navigation	Stack navigation, deep linking
Code quality	Component structure, readability, hooks usage
Reasonable scope	Completeness over polish; clear intent in incomplete areas

Quick Reference: vinobuzz.ai

- **Chat:** Floating chat, conversation history, product recommendations with “View details”
- **Product:** Wine modal with images, tabs (prices, details), Add to Cart, similar products
